Failure To Displace	5
Next Day Model	6

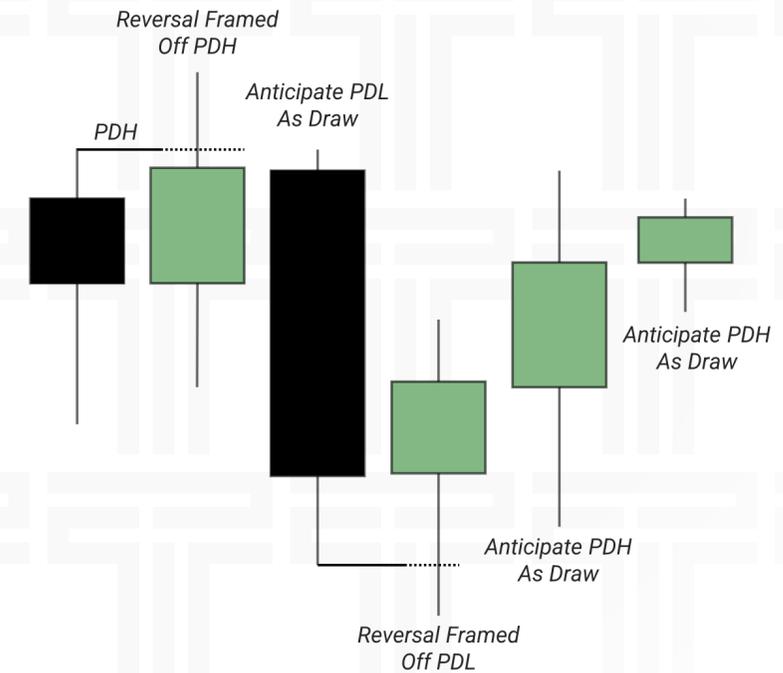

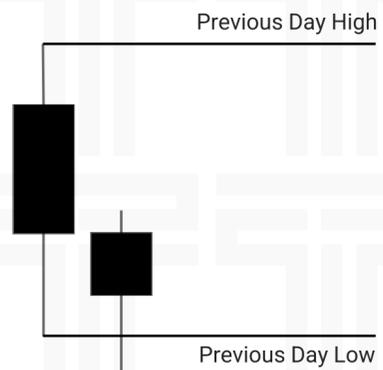

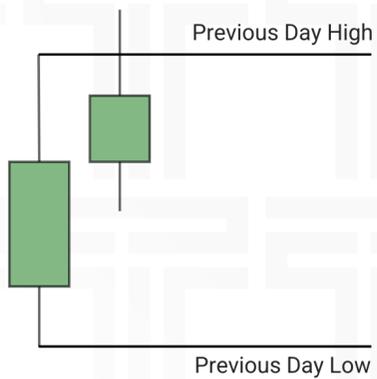

Previous Day High & Low

Is price more likely to reach for previous day high or previous day low?

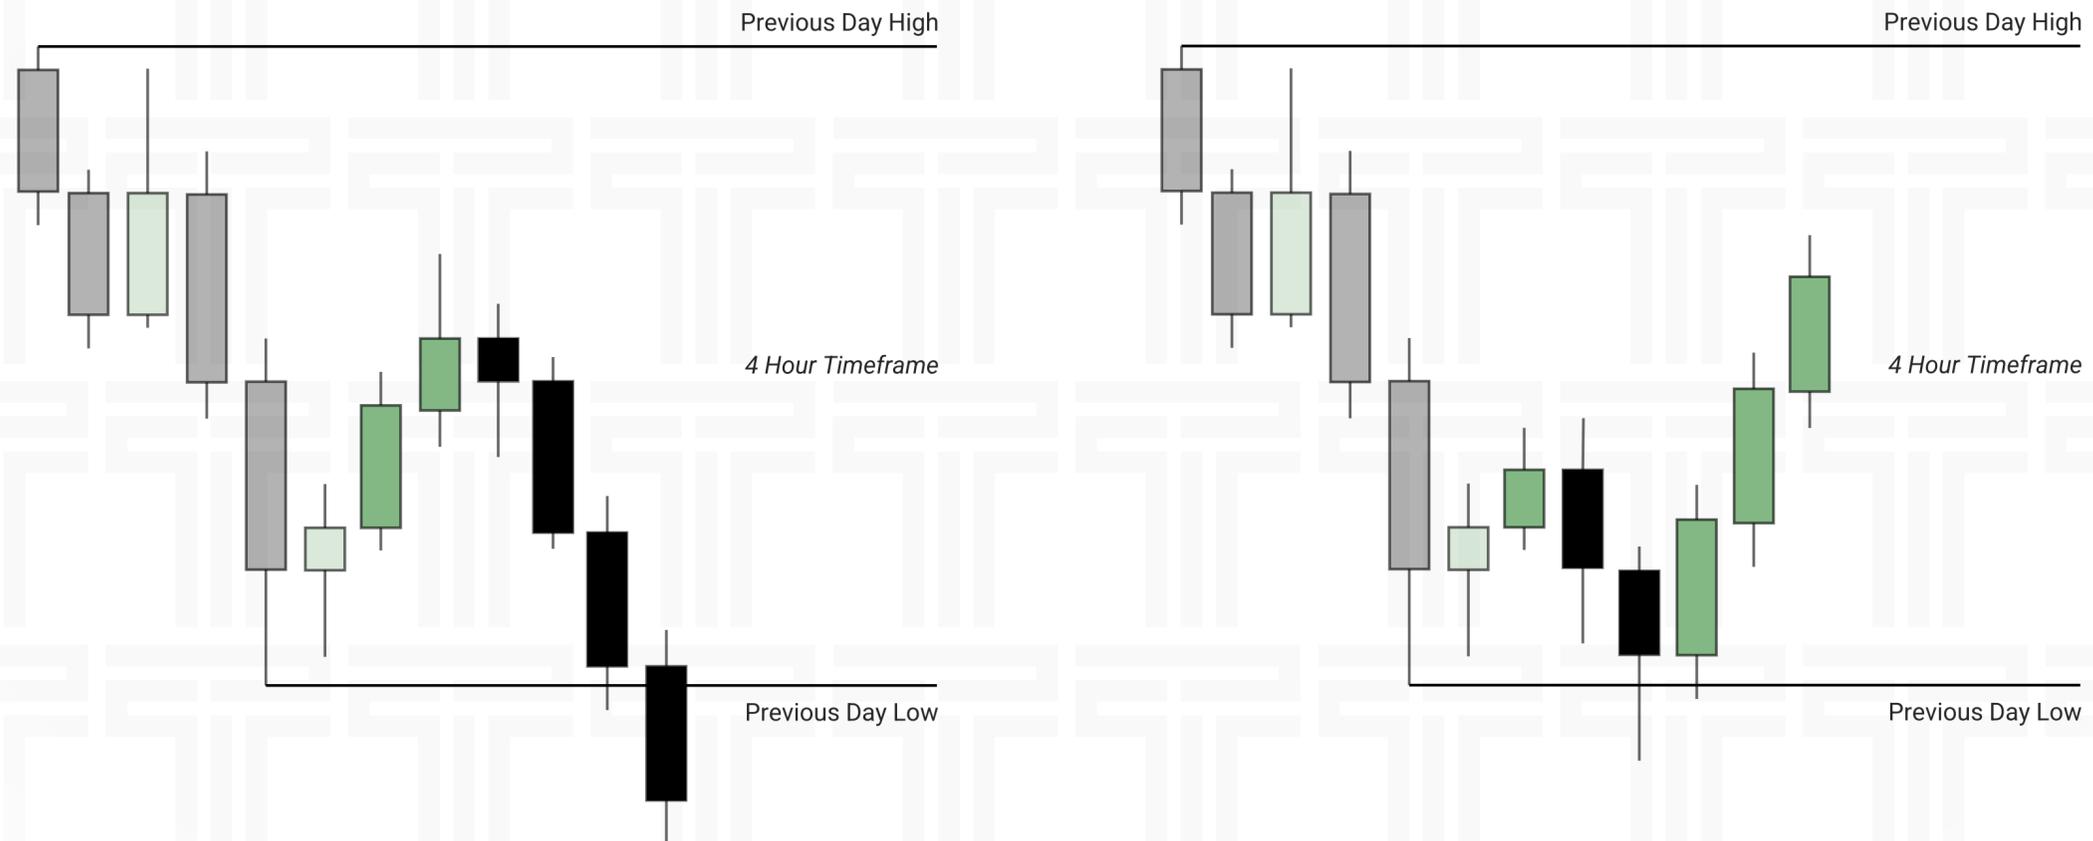

Previous Day High & Low are liquidity levels that can be used as a draw on liquidity or frame a reversal or continuation.

Reversals can be framed off PDH and PDL when there is a failure to displace.

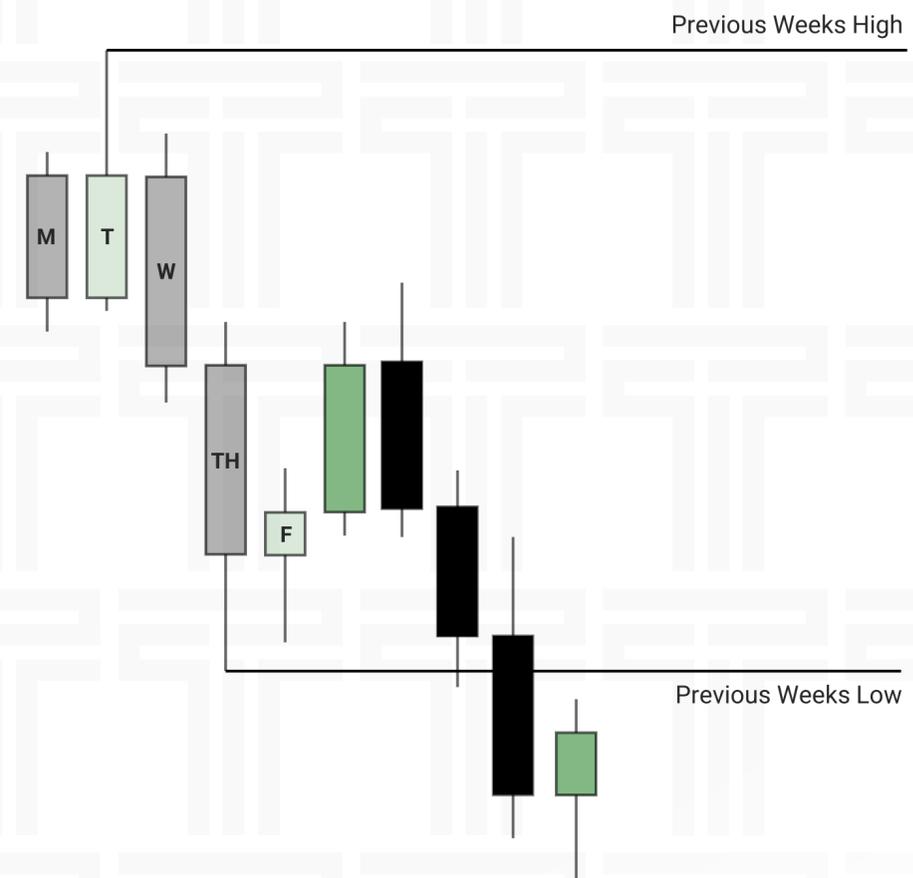

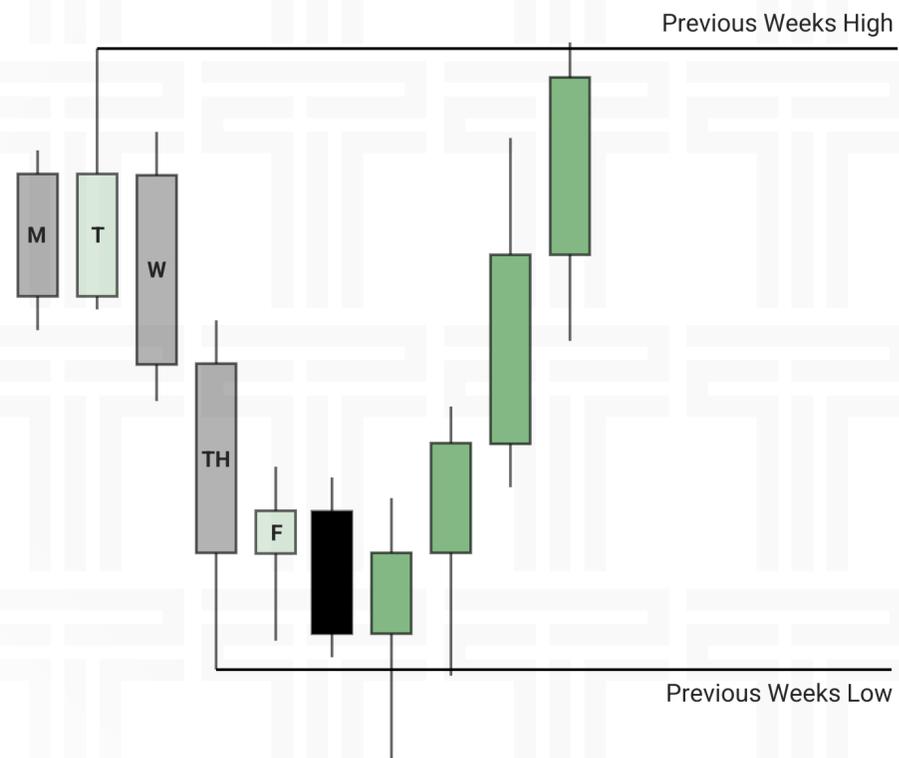

Previous Day High & Low

Example of Previous Day Low being used as a draw on liquidity and being used to frame a reversal. H4 chart is shown.

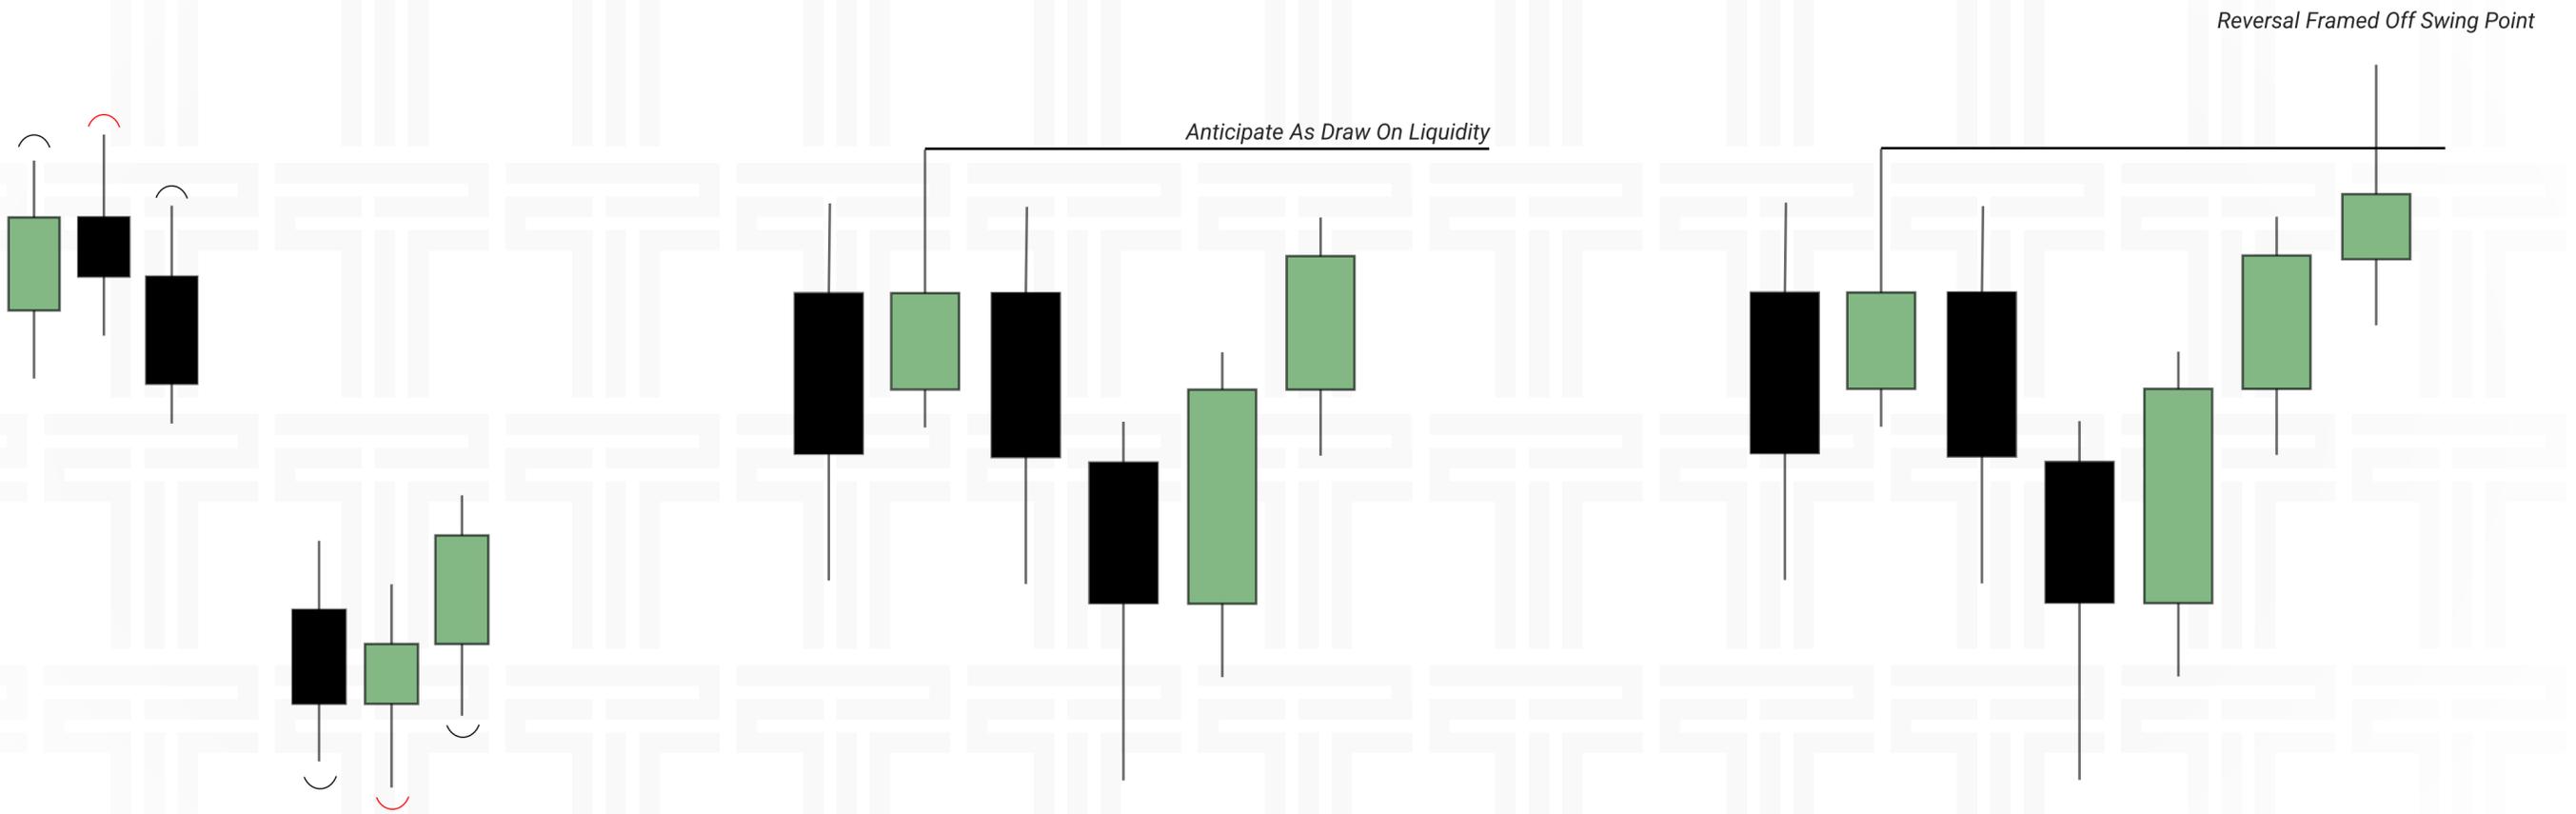

Previous Week High & Low

Previous Week High & Low are liquidity levels that can be used as a draw on liquidity or frame a reversal or continuation.

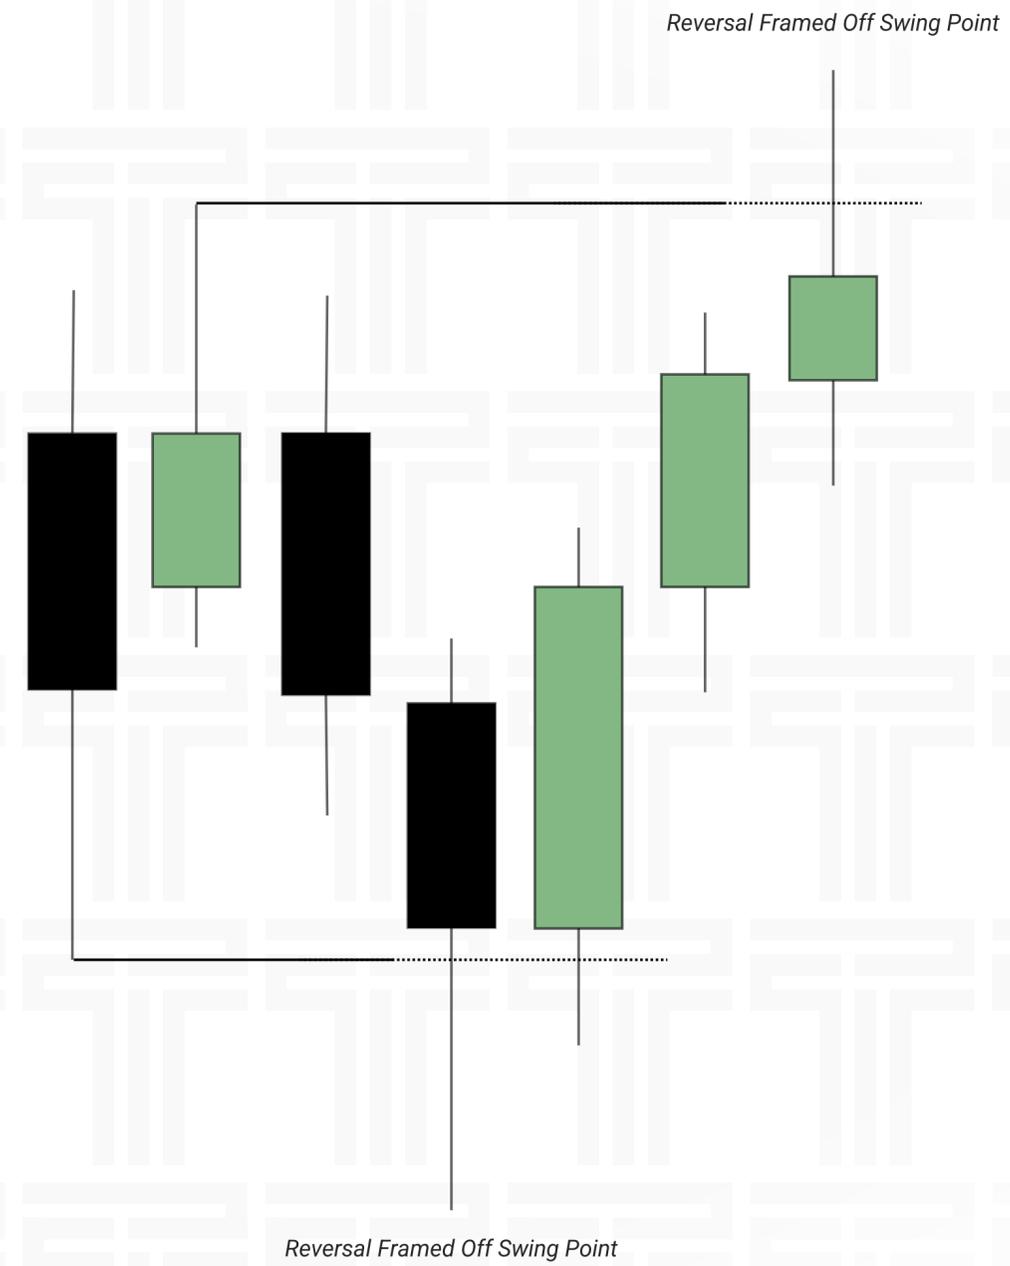

Swing Points

Swing points in the market can be used as a draw on liquidity or be used to frame a reversal.

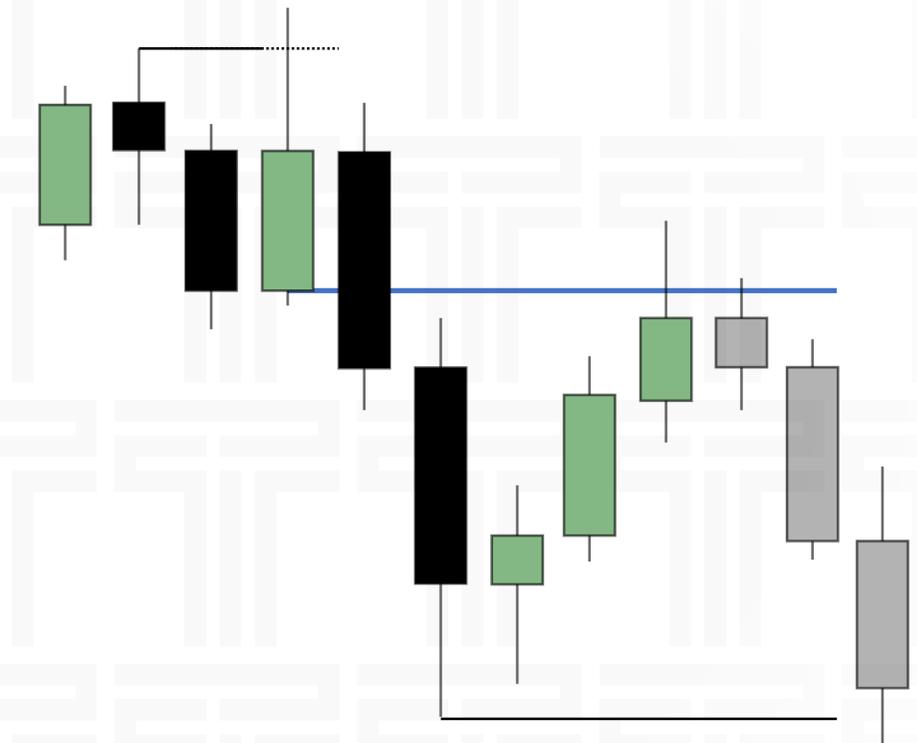

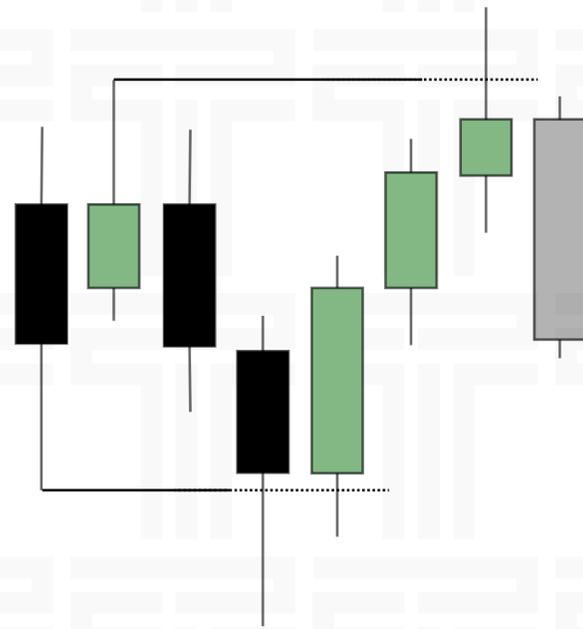

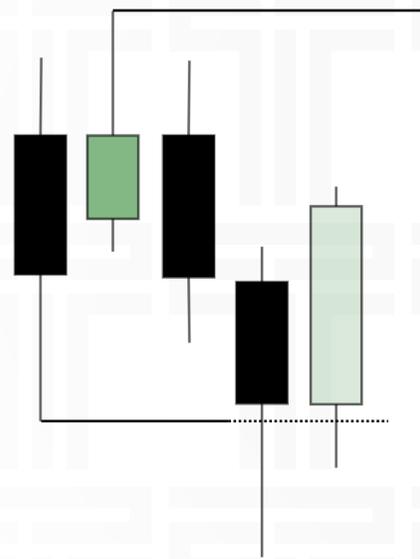

Failure To Displace

Failure to displace over old highs & lows
can be used to frame a reversal.

Next Day Model

When price respects a PD array or fails to displace over a swing high or low, the next candle can be anticipated.
